ABSTRACTED-PUB-NO:EP 729271A
BASIC-ABSTRACT:The image generation system has an image capturing medium
such as a camera. An instruction set is used for posing a subject for a
partic. scene content of the pre-existing background images. the poses are
to be captured as subject images. A backdrop is also provided and
facilitates isolation of the subject in subsequent image processing used to

incorporate the poses in the customised image.   USE/ADVANTAGE - May also be
used to generate interactive game programs.

Search Topic:

Please write a detailed statement of search topic. Describe specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples or relevent citations, authors, keywords, etc., if known. For sequences, please attach a copy of the sequence. You may include a copy of the broadest and/or most relevent claim(s).

I've attached claims because they're easy to understand.
I'm looking for a camera, likely a digital camera, which
comprises a script to tell a user how to take a series
of pictures, probably related pictures. For example,
an insurance agent might be prompted to take the
front of a car, the side, the other side, a 45° angle,
etc. Not too many details exist regarding these scripts,
so any set of instructions which prompts a user
to perform certain operations would be relevant. Conceivably,
a script could exist for taking 1 picture, but the
spirit of the present invention relates to taking multiple
related pictures. A script could also be "instructions"
or "prompts" - some sort of interactivity is preferred.
The word script has many meanings which are probably
not related, such as Java Scripts or computer scripted
languages (i.e., there would have to be something more than
the word "script") - My guess is A digital camera is
not claimed. Please call if questions remain.

P.S. An "imaging device" could be a
scanner, but camera is preferred

Thanks
X-R.
